PROFESSIONAL SUMMARY

Lead Data Engineer with 10 years of experience designing and owning enterprise insurance analytics. Built end-to-end data pipelines, from ETL ingestion and master data management through OLAP architecture and executive dashboards, as primary data strategist reporting directly to C-suite. Now leading a data engineering team: owning hiring, architectural direction, AI training/adoption, and a lakehouse migration to Azure cloud.

WORK EXPERIENCE

Lead Data Engineer

Pharmacists Mutual - Algona, Iowa

March 2026 - Present

- Promoted to lead the data engineering team, owning data strategy, architectural decisions, hiring, and onboarding for the company's analytical reporting.
- Set architectural direction for the platform: migration from on-prem SQL Server and SSIS to a medallion lakehouse on Azure and Microsoft Fabric.
- Recruited and onboarded a senior data engineer, and trained the team on the Ataccama MDM/DQ platform, our end-to-end SSIS ETL, converting undocumented, single-owner knowledge into a team-owned product.
- Championed Claude Code adoption across the org; ran the initial evaluation and authored the security framework (data guardrails, approvals, custom Warehouse SQL MCP) that cleared it for production.

Senior Software Engineer

Pharmacists Mutual - Algona, Iowa

2024 - March 2026

- Rebuilt enterprise analytical reporting from scratch, replacing legacy vendor logic with documented SSIS, SQL architecture, Tabular models, and Power BI, cutting storage 50% and processing time over 60%.
- Integrated Ataccama MDM into the data pipeline, redesigning ingestion to flow through master data management rather than direct from source.
- Led evaluation and recommendation of the MDM platform adopted by the organization; served as primary decision-maker for all data architecture and strategy initiatives, reporting directly to C-suite as sole owner.

Software Engineer

Pharmacists Mutual - Algona, Iowa

2020 - 2024

- Assumed full ownership of the enterprise ETL, SQL data architecture, and Tabular/Power BI reporting stack, transitioning the team from a failed third-party vendor to an internal platform.
- Designed and maintained SQL Server databases, SSIS packages, and DAX-driven Tabular models powering executive dashboards.

Developer

Pharmacists Mutual - Algona, Iowa

2018 - 2020

- Built a Java integration with Paymentus to enable automated payments and paperless billing.
- Initiated the rebuild of the ETL and reporting architecture after the analytical reporting vendor ceased operations, establishing the replacement platform.

IT Contractor / Intern

Pharmacists Mutual - Algona, Iowa

Summer 2016 - December 2017

- Developed a nightly Java process running government OFAC compliance screenings; cleared the full SSRS report backlog; supported internal and external .NET applications.

EDUCATION

B.S. Software Engineering

Iowa State University - Ames, Iowa

Graduated December 2017

Dean's List - Fall 2013, Spring 2014, Spring 2015, Fall 2015, Spring 2016

SKILLS

Data Platform & Architecture: Microsoft Fabric (Lakehouse, Warehouse, Data Factory, OneLake), SQL Server, MongoDB, Medallion/Kimball modeling, semi-structured/NoSQL data, CDC, dbt Core, Dagster, DuckDB, Tabular Models, Power BI, Evidence.dev, SSIS, SSRS

Master Data Management: Ataccama MDM/DQ

Cloud & Infrastructure: Terraform, Cloudflare, Azure, Logic Apps, Bicep, Entra ID/RBAC, cost governance

Languages & Scripting: SQL, T-SQL, Python (spaCy, pandas), DAX, PowerShell, TypeScript, JavaScript, Java, C# (.NET)

AI & Automation: Claude API/SDK, OpenAI API, Claude Code, Opencode, Ollama, agentic development workflows

Tools & Practices: Git, GitHub Actions, CI/CD, Agile/Scrum, Visual Studio, SSMS, VS Code

PROJECTS

Gutenberg-Fingerprint (gufime.com)

Nightly change-data-capture stylometrics pipeline, designed and operated solo on one ~\$5/month OVH VPS: Postgres, plain Python, and dbt Core orchestrated by Dagster OSS, published to Cloudflare Pages. A watermark table drives CDC; a dbt fact constellation adds SCD2 snapshots, source freshness, audit logging, and a full test suite, compiling against DuckDB (dev) and Postgres (prod). Backups ship to Cloudflare R2; the Evidence.dev site and Dagster UI run behind a Cloudflare Tunnel; OpenTofu provisions everything.
