

Cover Letter

To the Nous Research team,

I'm writing for your general pool, as a software and AI engineer who wants to build in almost any capacity you'll have me. In all candor: I like your product, and I trust a careers page that quotes Shackleton ("Constant danger, honor and glory in the event of success").

For ten years I've shipped production software end to end. My current title is Lead Data Engineer, but the work I do for its own sake is full-stack: React 19 front ends with canvas-rendered graphical interfaces, Node/Express and FastAPI services, auth, session, and rate-limiting layers, Postgres and Mongo storage, and Infra/CICD (OpenTofu, containers, Github Actions). My projects live at github.com/sandervw. Dying Skies runs a procedural universe across four pieces of the technical full stack. Gutenberg-Fingerprint is a full nightly CDC pipeline I operate solo on a \$5 VPS.

The AI side is where I've bet my career. I ran the evaluation and wrote the security framework that cleared agentic coding tools for production at a risk-averse company, custom SQL MCP server included. I run open-weight models at home on an RX 9070 XT with Ollama, and I follow your work closely.

I'm remote-native, high-agency, and used to owning undocumented systems. If there's something at your company that needs the work of a ten-year, forward-thinking, AI-pilled engineer (on Hermes, the Portal, the infrastructure, anything), I'm your guy.

Regards,
Sander VanWilligen
